

GO GAŞ AND POWER

Integrity | Transparency | Trust

Who We Are

As one of the UK's fastest growing Utilities Consultancies, our dynamic team have more than 30 years combined experience in the Energy sector. We have joined forces directly with the UK's Leading Energy Suppliers to negotiate the most appropriate products for your business.

The Personal Touch

Our founder, Lucy Walton embarked on her career working for Cleaner Air Solutions. With a natural aptitude for the industry, her talent was quickly recognised and she was promoted through the ranks at Utility Consultancies before establishing her own business. In the space of two years, Lucy and her team have secured many high profile clients throughout the UK, and currently support 3500 businesses.

We are a local business on a mission, to help you and your business get the most out of your energy and water.

Our Commitment

To consistently deliver an unrivalled level of service to our clients, which continually exceeds expectations in every aspect of the ever changing utilities market.

The result a service like nothing you have ever experienced before.

Services

Dedicated Account Management

You will be assigned a specialist Account Manager. As part of a dedicated service they will:

Develop an understanding of your individual business utility requirements & monitor the market to ensure that you are always fully aware of market conditions.

By Tailoring to the needs of your company, we can ensure that you are getting the best deal (without the headache)

Energy procurement

Following a thorough analysis of your current contract, we'll conduct a full market evaluation, tailored to you. Using our buying power and relationships we will secure the most competitive rates and products to suit your business needs.

Products and Advice

We are committed to reducing your energy consumption. As a result of the EMR (Electricity Market Reform), a new Government initiative, it is important to develop a carbon reduction strategy. This will help mitigate

Bill Analysis

Accurate Billing

We supply regular consumption data to your supplier to generate a more accurate calculation of bills.

Overcharges

Through thorough monitoring we can ensure that overcharges are dealt with swiftly. We reclaim any overcharges on your behalf, giving you complete peace of mind.

New Meter Connections

We have completed numerous projects throughout the UK, where our clients have been relying on generators to give them the excess power required. By getting rid of the generators and upgrading their current supply or building a brand new substation in some cases. They have saved money on expensive running costs. We can help fund these projects.

Voltage Optimisation

Voltage optimisation is an established, reliable and cost effective way to reduce energy consumption in your business. Did you know that you could reduce the cost of your energy by up to 18% through voltage optimisation and management?

We can undertake a full free of charge review for you and recommend real money saving solutions.

We Are Passionate About Providing Exceptional Service

But Don't Just Take Our Word For It!

"I used Go Gas and Power recently when our Group energy contracts were up for renewal. Claire has been professional, friendly and knowledgeable throughout the whole experience. She has answered questions promptly and always come back with an answer or update in the timeframe promised. I have been very pleased with the service which they have offered and would recommend anyone looking for a smooth energy contract renewal." Thanks

**Elizabeth Director
Yorkare Homes Limited**

"I found you very helpful and felt no pressure just support in finding a cheaper deal for our energy supply. I had been badgered by other companies trying to get our business but I was at total ease with Go Gas & Power Ltd. I would recommend other people to use your company to take the stress out of finding a better deal."

**Jo Operations Manager
Racoon International**

"The team worked hard to ensure the best possible deal for Barnard Castle School, providing regular updates and advice as things progressed. A friendly and professional service. A big thanks to Go Gas & Power Ltd."

**Steven Facilities Manager
Barnard Castle School**

"Go Gas & Power did exactly what I asked of them. They surveyed the market to find a selection of the cheapest supply prices across various contract types, advised of the advantages/disadvantages of each and then left me to me my decision. One contract already offered couldn't be bettered by them so they advised immediately to go with it."

**Paul - GC Property
Management LLP
Grange Business Park**

" Having evaluated several Utility Consultancies, Go Gas and Power (GG&P) stood out as the obvious choice. Entrepreneurial leadership and a genuine passion for the industry allows GG&P to offers independent expert advice and practical sourcing solutions. GG&P demonstrated a keen understanding of our commercial, consumption and risk strategy which delivered a utility contract that exceeded our expectations. Thank you Go Gas and Power"

**European Category Buyer –
Facilities, Caterpillar UK Limited**

Project Summary

Installation of a single EMP1800s – Staged Voltage Tracking ECO-MAX Power Optimiser with a custom cable termination compartment

The Powerful results of Voltage Optimisation

Case Study

7-8% average energy savings achieved by the ECO-MAX, and savings of £40,000 per year, with a payback of under 2 years

Energy & Financial Summary of Project

Reduction in consumption per year	463,176 KWh
Reduction in electricity cost, per annum	£40,226.84
Total project cost	£71,061.52
Payback period	21.2 months
Reduction in CO ₂ emissions, per annum	243 tonnes

Kellogg's have been working for years to continually improve their environmental performance, specifically looking at reducing their energy use, greenhouse gas emissions, water use and waste sent to landfill sites.

Part of this process involved surveying the facility, with a view to identifying actions to reduce energy consumption. It became clear that voltage optimisation would be beneficial in reducing the Manchester facility's energy consumption and offer considerable cost savings too.

GWE were contacted as a potential supplier, and it emerged that GWE were the only company that could supply a single optimiser solution.

Data logging allowed us to measure consumption and provide baseline figures. During this process it became clear that the site suffered from large loading swings which made it unsuitable for standard forms of fixed voltage optimisation.

GWE's EMPs optimisers are used to optimise the voltage to a single piece of equipment, localised area or an entire building. They can be supplied with fixed or variable outputs, with or without power factor correction.

In this instance a voltage tracking (stabilised) optimiser was designed to deal with the specific issues identified, and to achieve the maximum possible energy saving. The unit was installed and further data logging carried out to measure the savings.
